

## FM4850 - E2 8.448Mbps to HSSI Converter

The Metrodata FM4850 DSU is used to interface high performance DTE equipment such as bridges or routers to 8.448Mbps E2 services. The DTE equipment presents a HSSI interface. The FM4850 can be used at either end of the Wide Area link. Error conditions and usage statistics are gathered and stored by the FM4850. Unit set-up is done via a comprehensive menu system which is accessed via a local or remote terminal.

The optional Metrodata LM1100 SNMP Enabler permits management via a LAN using an SNMP system.
